

Installing Entity Framework Services in Visual Studio

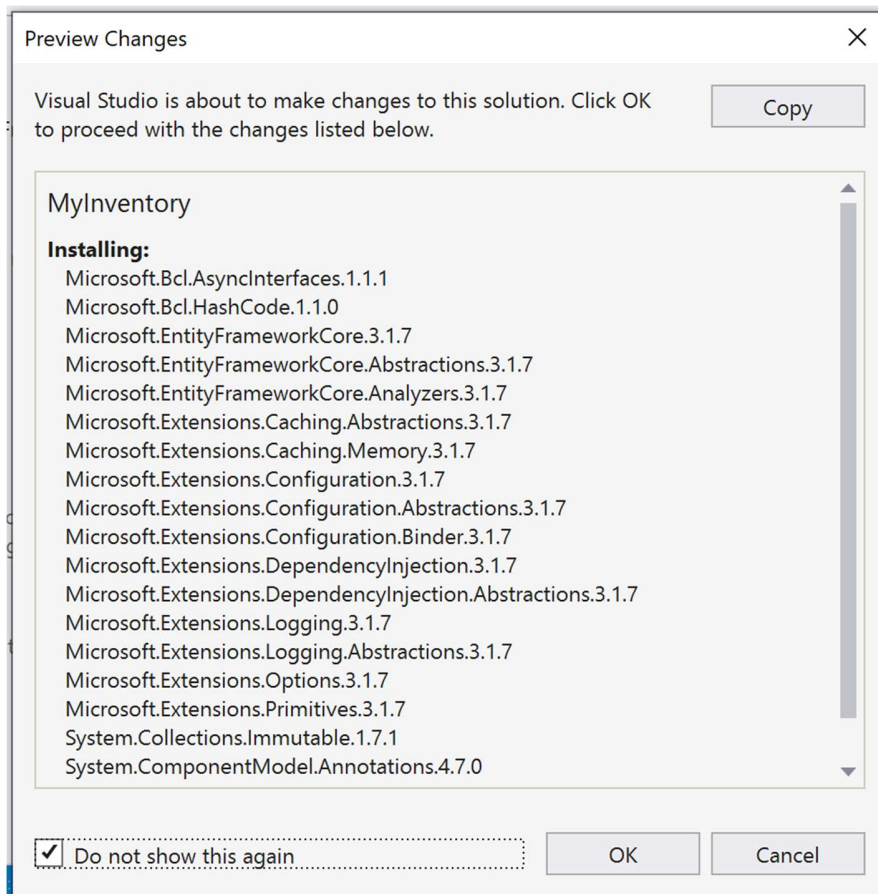

1. From the **Solution Explorer**, right-click the **MyInventory** project, then select **Manage NuGet Packages...**

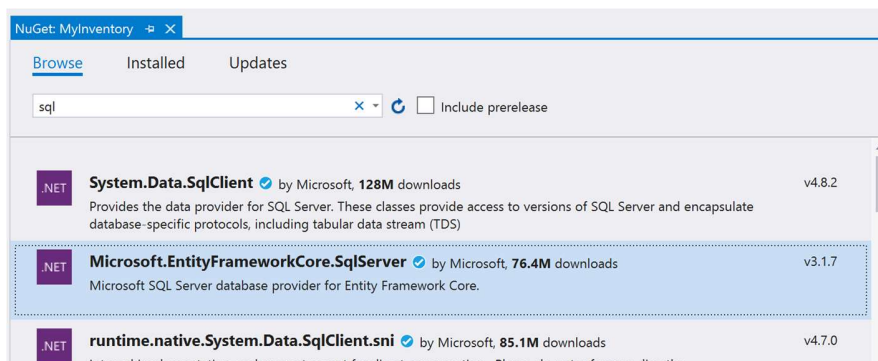

2. Click the **Browse** tab.
3. From the **NuGet Package Manager**, look for **Microsoft.EntityFrameworkCore**.

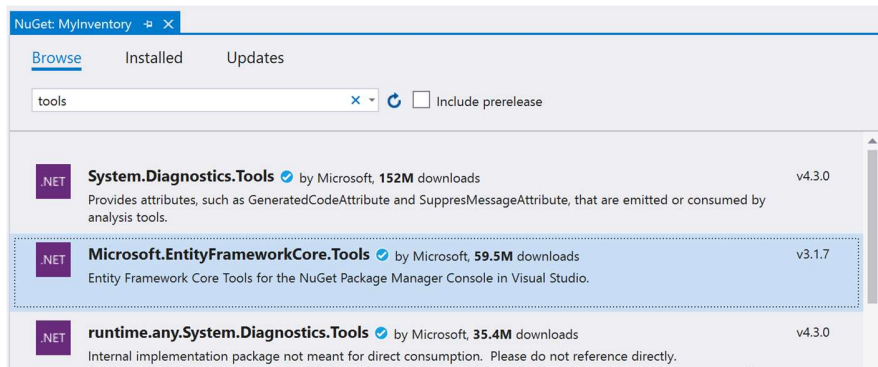

4. Choose the latest stable version, then click the **Install** button.
5. If the **Preview Changes** window shows up, check **Do not show this again** and click the **OK** button to proceed.

- From the **License Acceptance** window, click the **I Accept** button to proceed.
- From the **Nuget Package Manager**, look for **Microsoft.EntityFrameworkCore.SqlServer**.

- Choose the latest stable version, then click the Install button.
- From the **License Acceptance** window, click the **I Accept** button to proceed.
- From the **Nuget Package Manager**, look for **Microsoft.EntityFrameworkCore.Tools**.

11. Choose the latest stable version, then click the Install button.
12. From the **License Acceptance** window, click the **I Accept** button to proceed.
