

Adding DataTables in Visual Studio

1. From the **Solution Explorer** section, right-click the **wwwroot** folder, then select **Add > Client-Side Library**.

2. From the **Add Client-Side Library** window, choose **cdnjs** as Provider and input **datatables@1.10.21** as Library.

3. Ensure that the target location is **wwwroot/lib/datatables**. Click the **Install** button to continue.
4. Wait for the files to be downloaded and installed.
5. From the **Solution Explorer** section, a libman.json file will be updated.

```
libman.json  X
Schema: https://json.schemastore.org/libman
1  {
2    "version": "1.0",
3    "defaultProvider": "unpkg",
4    "libraries": [
5      {
6        "library": "font-awesome@4.7.0",
7        "destination": "wwwroot/lib/font-awesome/"
8      },
9      {
10       "provider": "cdnjs",
11       "library": "datatables@1.10.21",
12       "destination": "wwwroot/lib/datatables/"
13     }
14   ]
15 }
```

6. From the **wwwroot** folder, the DataTables-related files are added
