## Creating a new ASP.NET Core Web Application Using Visual Studio
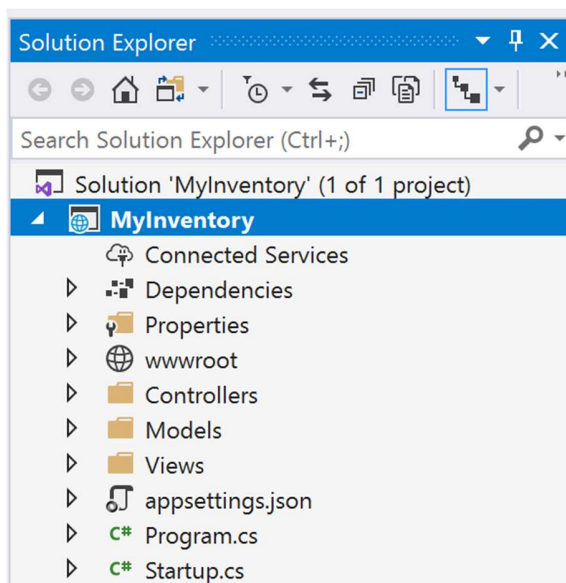

1. Open **Microsoft Visual Studio**.
2. Click **File > New > Project**.
3. Select **ASP.NET Core Web Application**.

4. Click the **Next** button.
5. Change the project name to **MyInventory**.
6. Change project location to **C:\users\<computer name>\Desktop**.
7. Check **Place solution and project in the same directory**.
8. Click the **Create** button.
9. Select **Web Application (Model-View-Controller)**.
10. Ensure that .**NET Core** and **ASP.NET Core 3.1** is selected.

11. Check **Configure for HTTPS**.
12. Click the **Create** button.
13. Wait for the application to load the project.
14. From **Solution Explorer**, existing files and folders must be present.

15. Press **F5** to run the web application for the first time.
16. The new application will be displayed in a browser.
